

Leading Lean Six Sigma Projects™

A Mastery Experience Workshop™

for the Process Improvement Professional

How You Will Benefit

- Experience a Lean Six Sigma project.
- Increase your project's potential by applying project management tools and techniques optimized for Lean Six Sigma.
- Leverage critical teamwork techniques to get your Lean Six Sigma team working together to find solutions.
- Earn the respect of your Project Sponsor and stakeholders.
- Utilize new tools specifically designed for Lean Six Sigma projects.

Topics Covered

- Stakeholder Analysis
- Voice of Customer, Process & Business
- Teamwork
- Communication Management
- Scoping via Project Charters and SIPOC
- Risk Management
- Resource & Time Management
- Roles and Responsibilities

Who Should Attend

- Individuals challenged to lead a Lean Six Sigma team.
- Project Managers wanting to sharpen their skills.
- Designed for Black Belts & Green Belts and secondarily for Master Black Belts and Project Sponsors.

Workshop Description

Leading Lean Six Sigma projects™ brings together Project Management and the DMAIC (Define, Measure, Analyze, Improve, and Control) methodology used in Lean Six Sigma.

During this 3-day workshop, participants will experience a Lean Six Sigma project from its initiation until mid-way through its Measure phase while entrenched in the people and project challenges they are sure to encounter in their real projects. No prior knowledge of project management is required, and all learnings are transferable to the participant's professional life beyond LSS.

Learning Methods

- Experienced certified instructors express concepts, tools and techniques; and facilitate group discussion.
- Every Mastery Experience Workshop™ features an iPad-based simulation designed to deepen learning by immersing participants in dozens of situations relevant to the subject matter. The simulation provides a rich multi-media experience designed to increase the levels of learning and give participants an experience to build on.
- Working in teams, participants put concepts, tools and techniques to use through practical exercises within the context of the simulation.
